

Lynn, Below is the Sweetwater Springs Water District monthly water sales through July. It's important to note that the District has bimonthly billing - the billings in the even months, which includes the latest month shown, have fewer customers than those in the odd months, and the billings reflect water usage in two months - the June amount, for example, reflects water use on meters read the first of July for May and June water use.

The District did have one waste of water letter sent during this past month and has spent considerable staff time addressing customer requests for information and assistance, and fixing system water leaks. New District water rates went into effect in July. The rates include inclining tiered rates with a relatively high tier 4 rate (\$5.00/Hcf) to encourage wise water use at all times.

I have a request that on your webpage you reference our most recent letter to our customers - it was done in May and is so dated. The link is <http://www.sweetwatersprings.com/notes/Russian%20River%20Water%20Conservation%20Plan.pdf>. A direct link would ensure that our most recent letter is always showing. Your webpage is currently showing the February letter which is out of date.

Please contact me if you have any questions or need more information.

Thanks,

Steve Mack
